BOHÁČEK JAKUB

I am a tech enthusiast, history nerd, design aficionado… and, more importantly, an **experienced web developer.**
I spent the last two years **coding** and **designing** beautiful, functional websites and **leading** teams working on complex web applications.

Education:

Gymnásium Jana Nerudy, French section
2012 – 2018
Focused on sciences; a selection of subjects taught in the French language; studies finished with Maturita.

Work experience:

NFCtron a.s., Front-end developer
2017 – 2019
NFCtron is a cashless payment solution for festivals and events. My role was to make the main website and maintain it. During the two years, the site went through 3 major redesigns, some of which I helped create, all of which I coded.

Čerstvá sváča a.s., Developer & project manager
2017 – 2018
Čerstvá sváča provided fresh snacks for children around the country through its online platform.
Starting as a crisis manager with the dev team, my responsibilities encompassed a wide spectrum from developing the web application, managing the team, graphic design and marketing.
Furthermore, we worked on several other client sites and the Fresh & Tasty project – bringing the technology of Čerstvá sváča for ordering school lunch.

Symtia, Developer & project manager
2018 – 2019
Symtia, a multifaceted project offering opportunities to anyone with a dream and potential.
My responsibility was to build the website and the brand.
